

ABEL JOSE

Aspiring AI Engineer | UI Developer

abeljose629@gmail.com • +91 95445 81701 • Kerala, India

PROFESSIONAL SUMMARY

BCA graduate and UI Developer with ~1 year of hands-on experience building responsive, data-driven web applications. Passionate about Artificial Intelligence and Machine Learning, with self-driven learning in Python, data science fundamentals, and AI integration. Experienced integrating OpenAI APIs into real-world projects (CAA OpenAI Chatbot), and eager to transition into AI Engineering — combining a solid software foundation with a deep drive to build intelligent systems.

TECHNICAL SKILLS

AI / Machine Learning

- Python (NumPy, Pandas, Scikit-learn) — self-study & academic projects
- Machine Learning fundamentals: classification, regression, NLP, spam detection
- OpenAI API integration — built production chatbot (CAA OpenAI Chatbot)
- Familiar with TensorFlow / Keras basics; actively deepening expertise

Software Development & Frontend

- JavaScript (ES6+), React, HTML5, CSS3, SCSS, Pug, Bootstrap
- Highcharts for data visualization in web dashboards
- Cross-browser responsive design; performance optimization

Tools & Collaboration

- Git, GitHub — version control and team collaboration
- Agile / cross-functional team workflows
- REST API consumption and integration

EXPERIENCE

Associate UI Developer | Appstation

Jul 2025 – Present

- Developed and maintained responsive web interfaces for 8+ client projects across Qatar, UAE, and international markets.
- Integrated OpenAI API into the CAA Chatbot project, gaining practical experience with AI/LLM API consumption and prompt handling.
- Built data-heavy dashboards using Highcharts, developing strong skills in data visualization — a key competency for AI applications.
- Collaborated with cross-functional teams (backend, design, QA) following Agile practices to deliver production-grade applications.
- Projects include: CAA OpenAI Chatbot, NCCAL, IPMS, Match4Hope, Media City, Sout-al-Khaleej, QSW, Qatar Fund for Development (QFFD).

KEY PROJECTS

CAA OpenAI Chatbot (Professional — Appstation)

- Built an AI-powered chatbot by integrating the OpenAI API into a web interface using JavaScript and React.
- Gained hands-on experience with prompt engineering, API authentication, and handling streaming LLM responses in a production environment.

Legal Hub — Advocate Office Management System (Academic Major Project, 2025)

- Developed a full-stack web platform for lawyers to manage cases, clients, and office records.
- Designed intuitive UI with structured data flows — applicable to document AI and information extraction use cases.

SMS Spam Detection (Academic Minor Project)

- Built an NLP-based classifier using machine learning to distinguish spam from legitimate SMS messages.
- Applied text preprocessing, feature extraction (TF-IDF), and trained a Naive Bayes / Logistic Regression model.
- Demonstrates foundational ML pipeline skills: data cleaning → feature engineering → model training → evaluation.

EDUCATION

Bachelor of Computer Applications (BCA) | [MAR Gregorios College of Arts and Science](#) 2022 – 2025

- Core coursework: Programming, Data Structures, Databases, Web Technologies, Software Development.
- Self-studied AI/ML topics including supervised learning, neural network basics, and Python data science libraries.
- Graduated with strong practical project experience in both web and machine learning domains.

CONTINUOUS LEARNING

Actively upskilling towards AI Engineering through:

- Python for Data Science & Machine Learning (Udemy / Coursera — in progress)
- Deep Learning & Neural Networks fundamentals (fast.ai / YouTube — ongoing)
- Experimenting with LangChain and building personal AI-powered mini-projects
- Following latest AI research papers and open-source model releases (Hugging Face, arXiv)
